The first step is to open your browser, search for "**Download VirtualBox**" on Google, and press enter to find the official setup files.

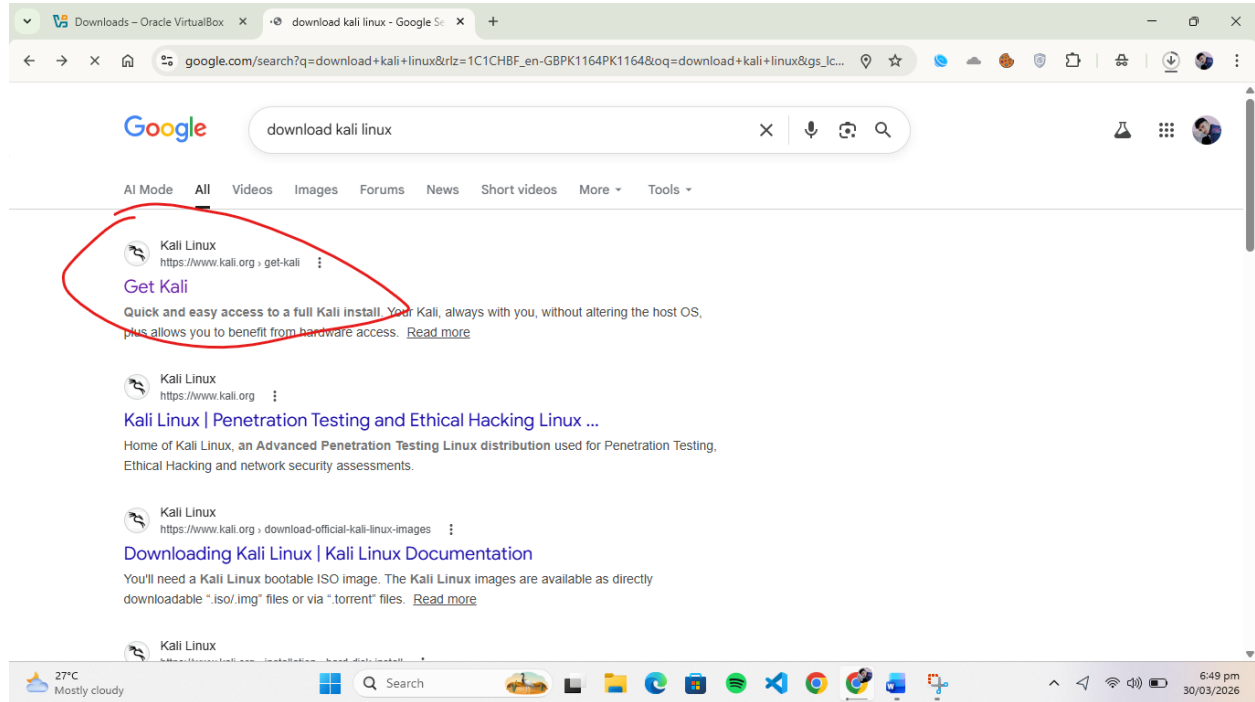

Next, click on the "**Windows hosts**" option on the VirtualBox download page to start downloading the installer file for your PC.

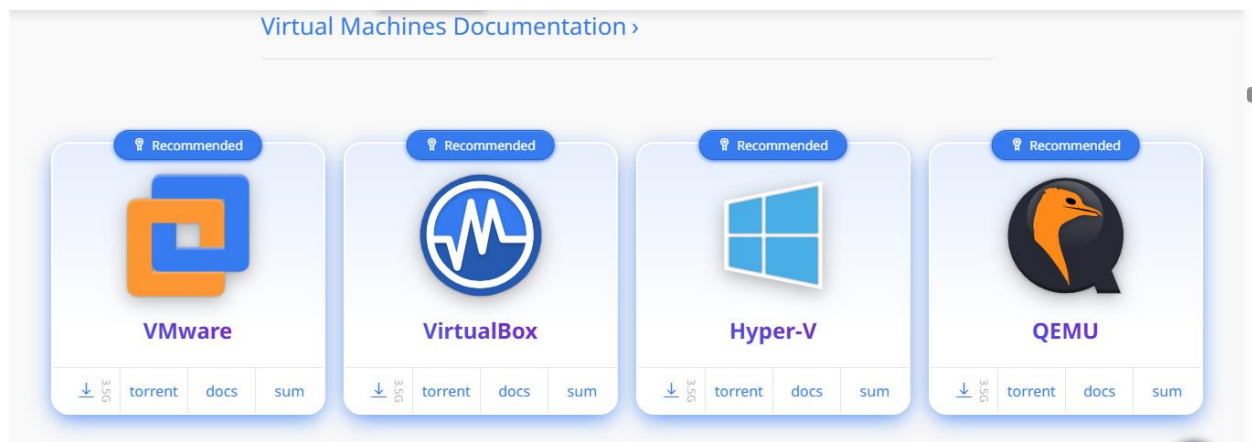

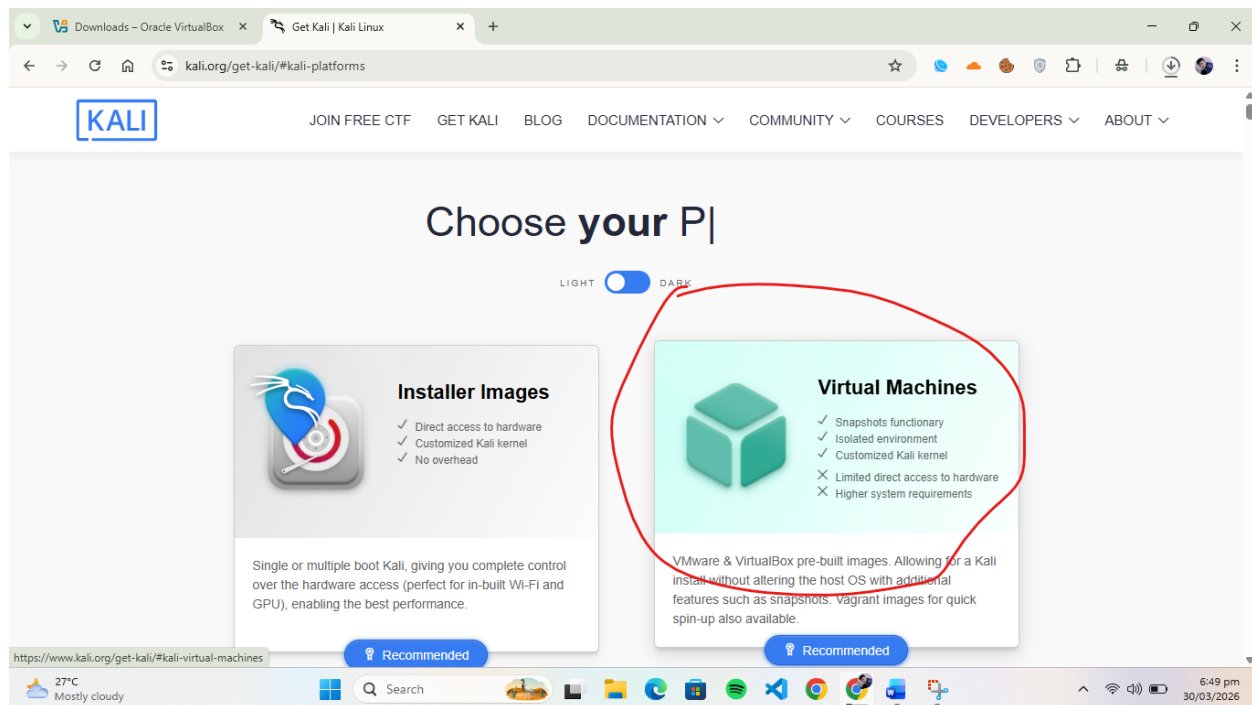

The download has started

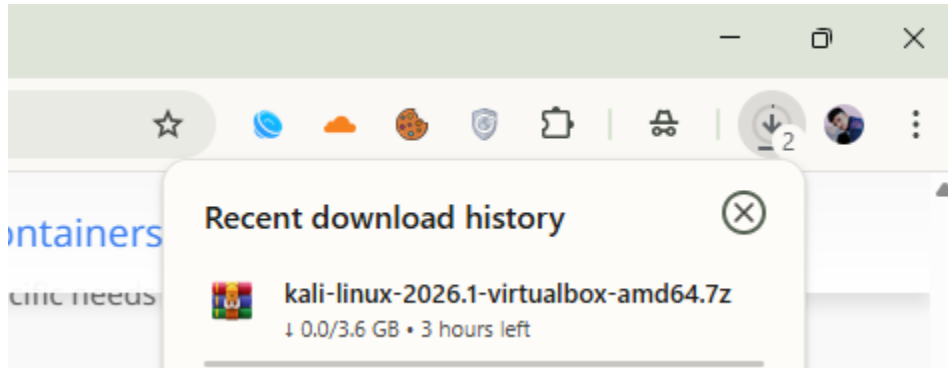

Next, search for "**Kali Linux Download**" on Google and navigate to the official Kali website to find the appropriate ISO file for your system.

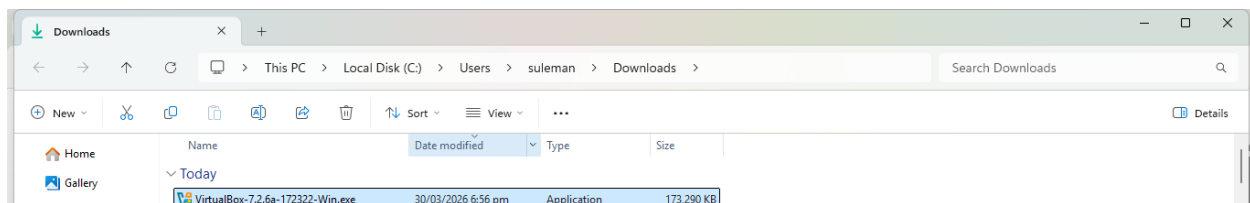

Go to the "**Virtual Machines**" section on the download page and click on the **VirtualBox** icon to download the pre-configured image file.

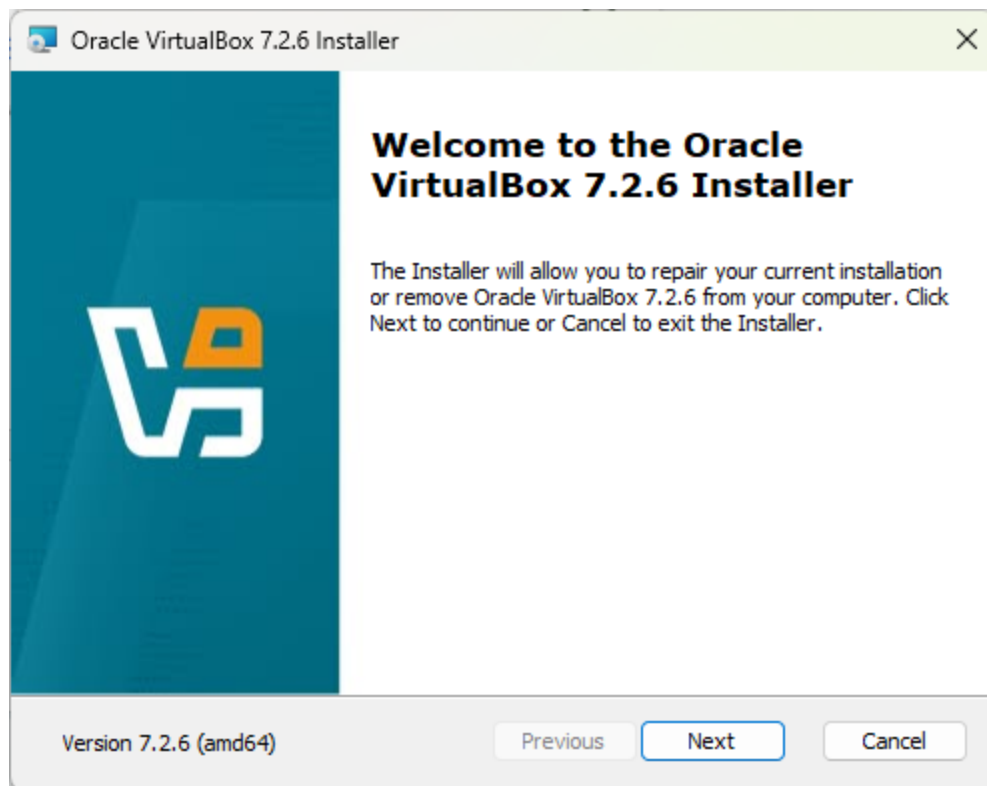

The download has started.

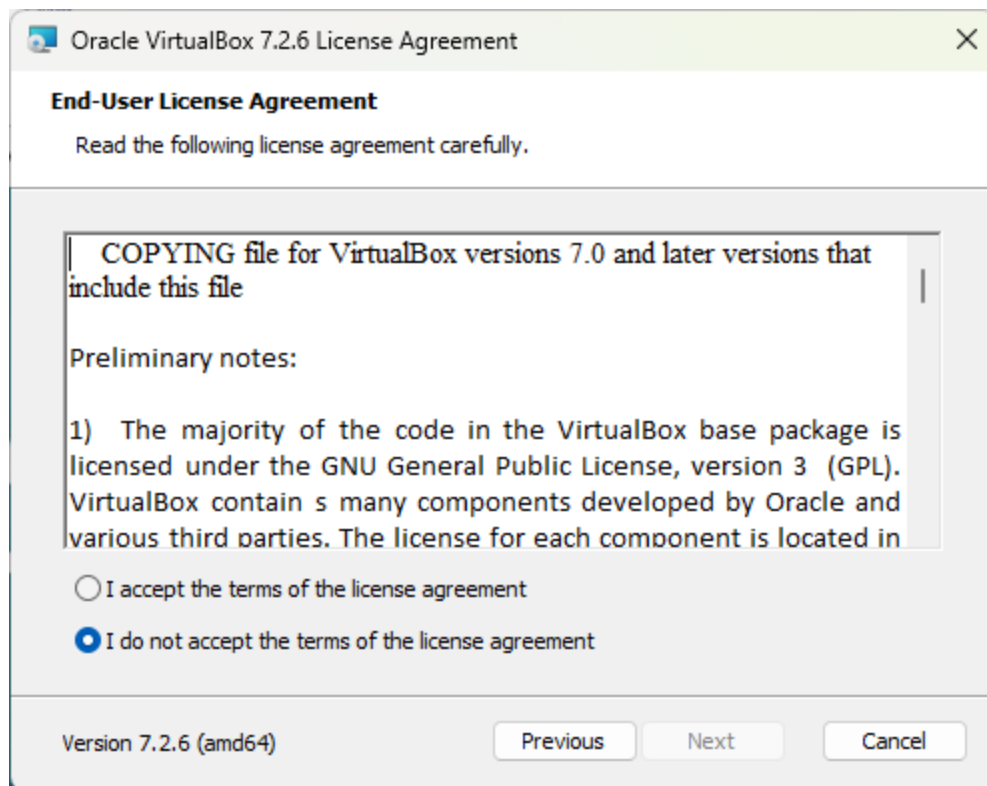

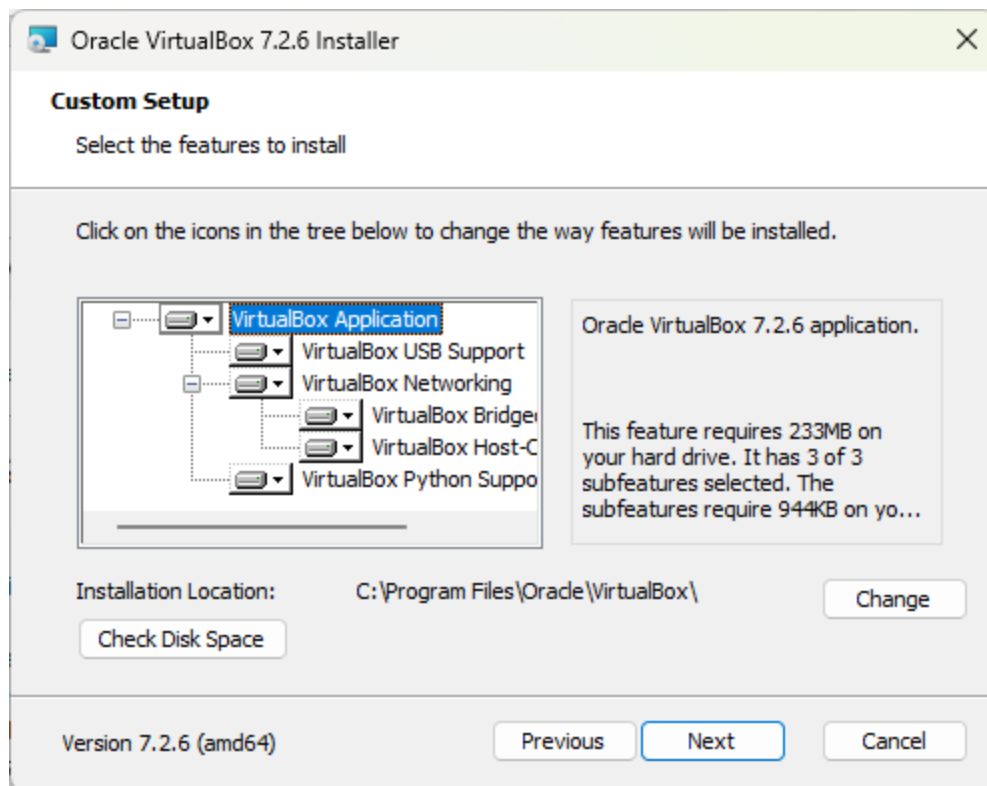

After the downloading of vb complete click on it.

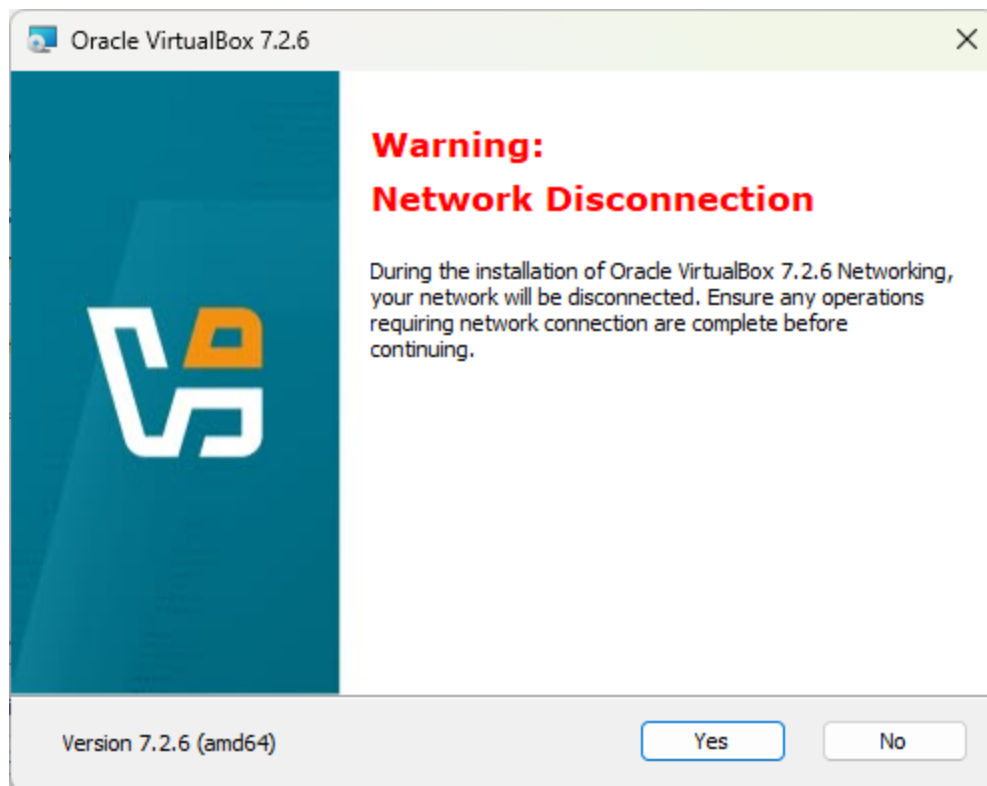

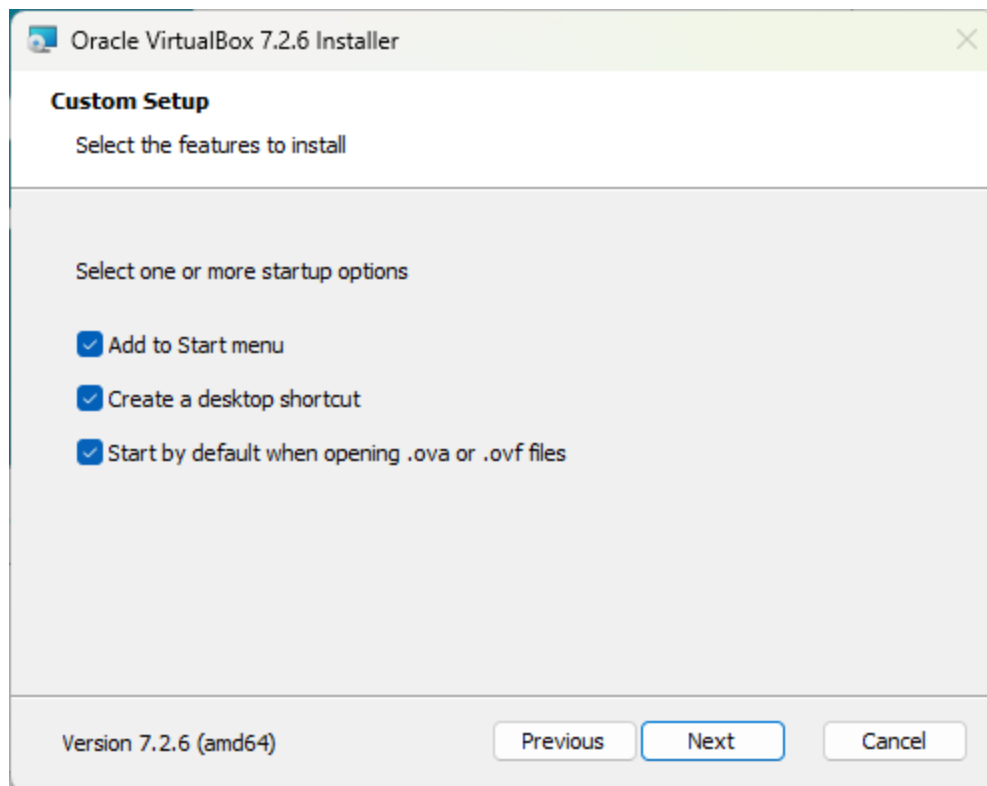

Now click on next and next until the installation finish.

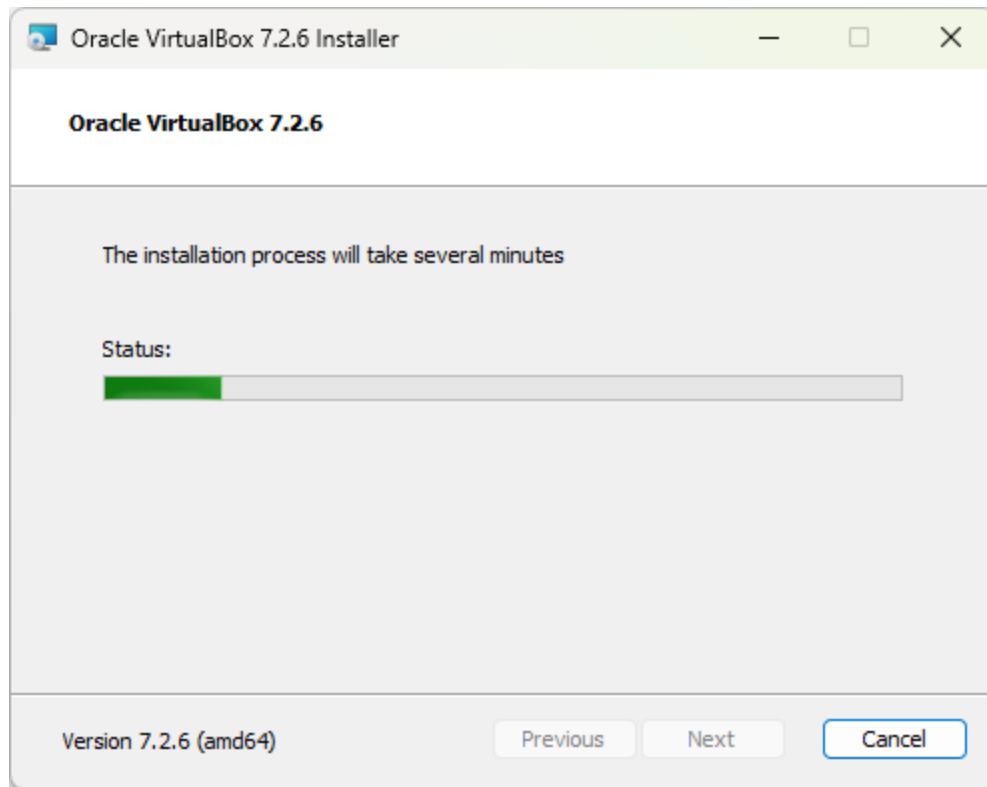

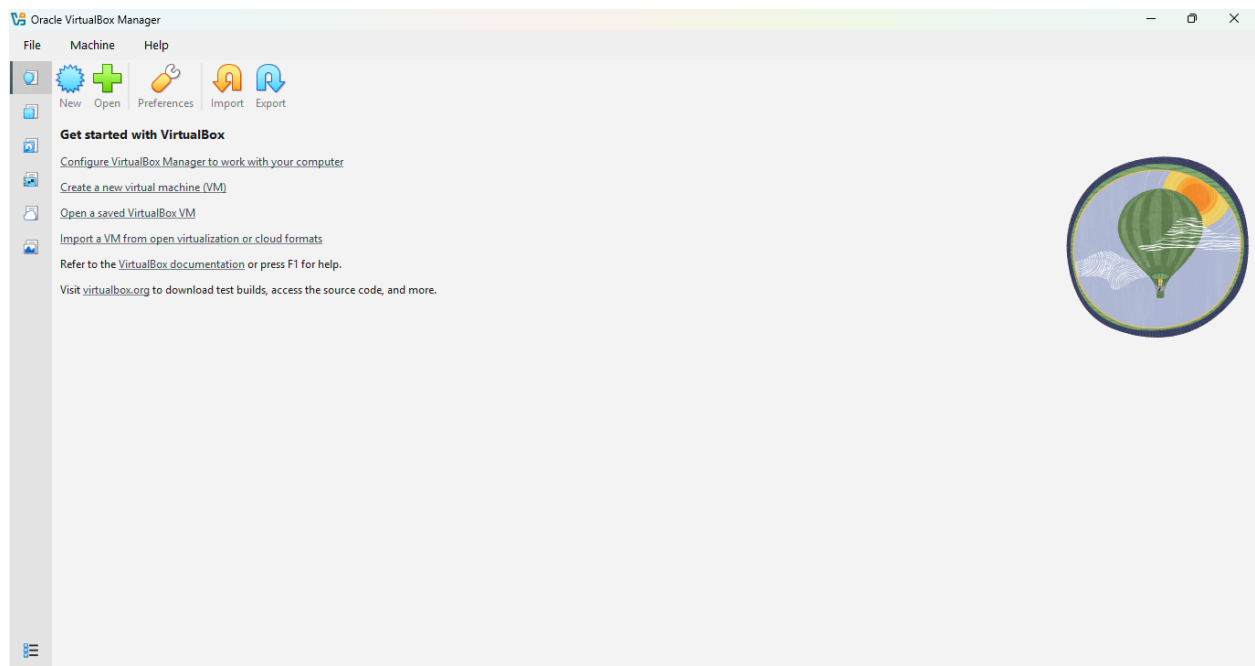

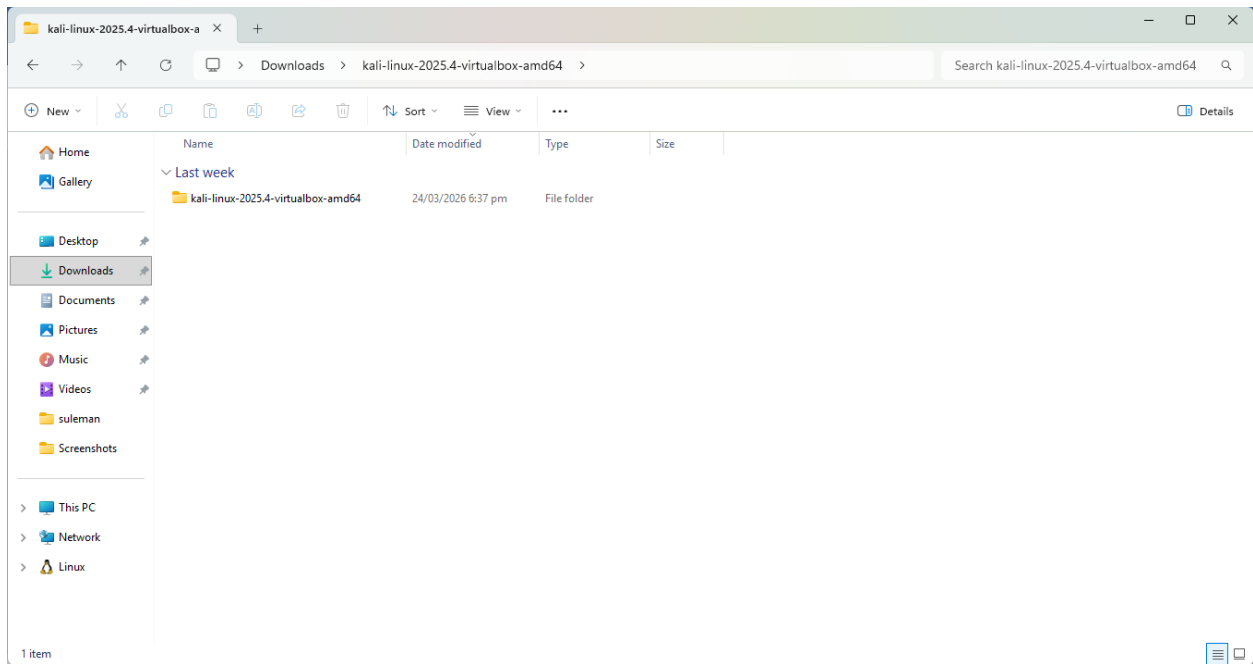

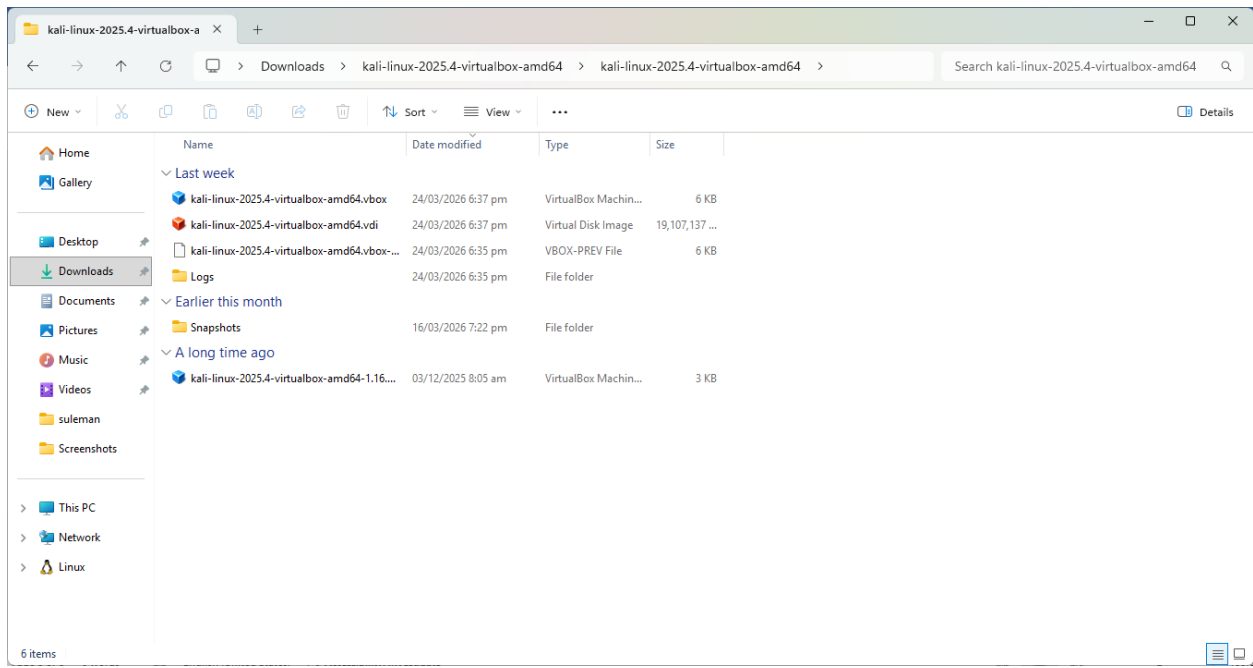

The interface look like this do not touch anything.

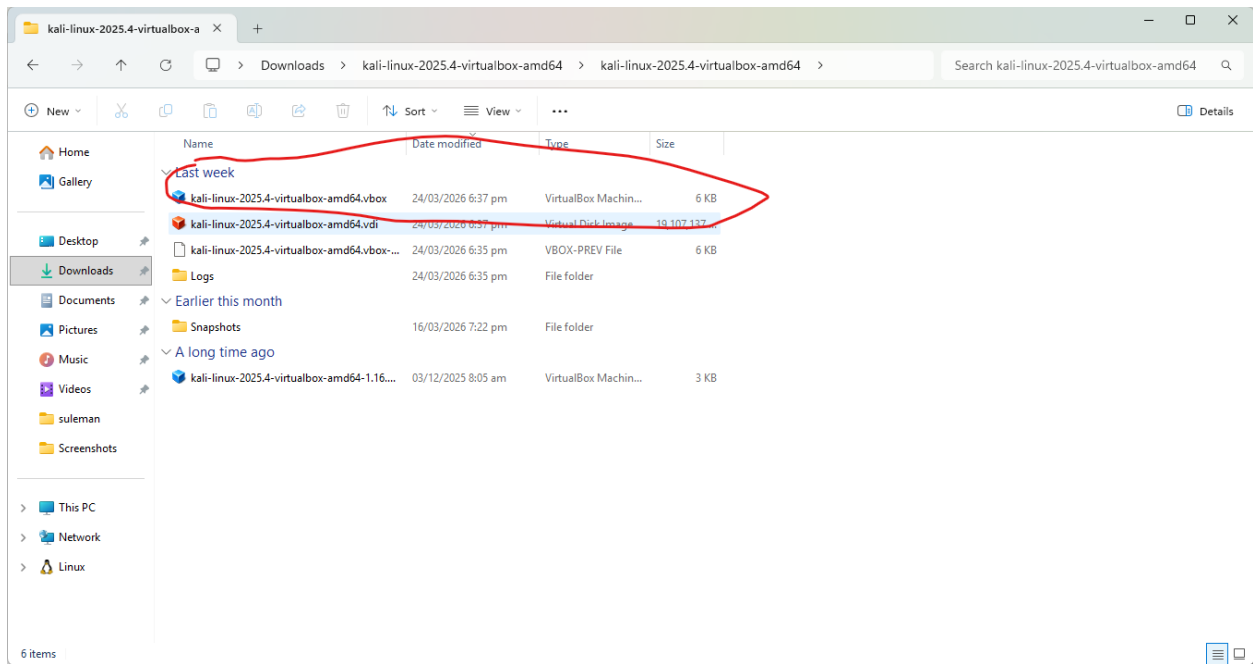

After the installation of kali finish extrat the file.

Then the extrat file look like this.

Click on the file with the VB extension.

Then a kali file automatic will created just lanch the kali by clicking on start button.
